

SATVA SOLUTIONS

Satva Guide Sample

Setup Guide

Name of the Project	Satva Guide Sample
For	Satva Solutions — internal & client teams
Prepared By	Satva Solutions
Created On	25 September 2026

Version History

Revision Date	Description of Change	Author
25 September 2026	First release	Satva Solutions

What this sample shows

This is a **format sample**, not a real product guide. It was produced by the `satva-guide-gif` skill so you can check the Satva house format before the skill is uploaded: the blue SATVA banner in the header, the contact bar and page numbers in the footer, the cover page with a Version History table, Mulish text, callout screenshots, tip and warning boxes, and tables.

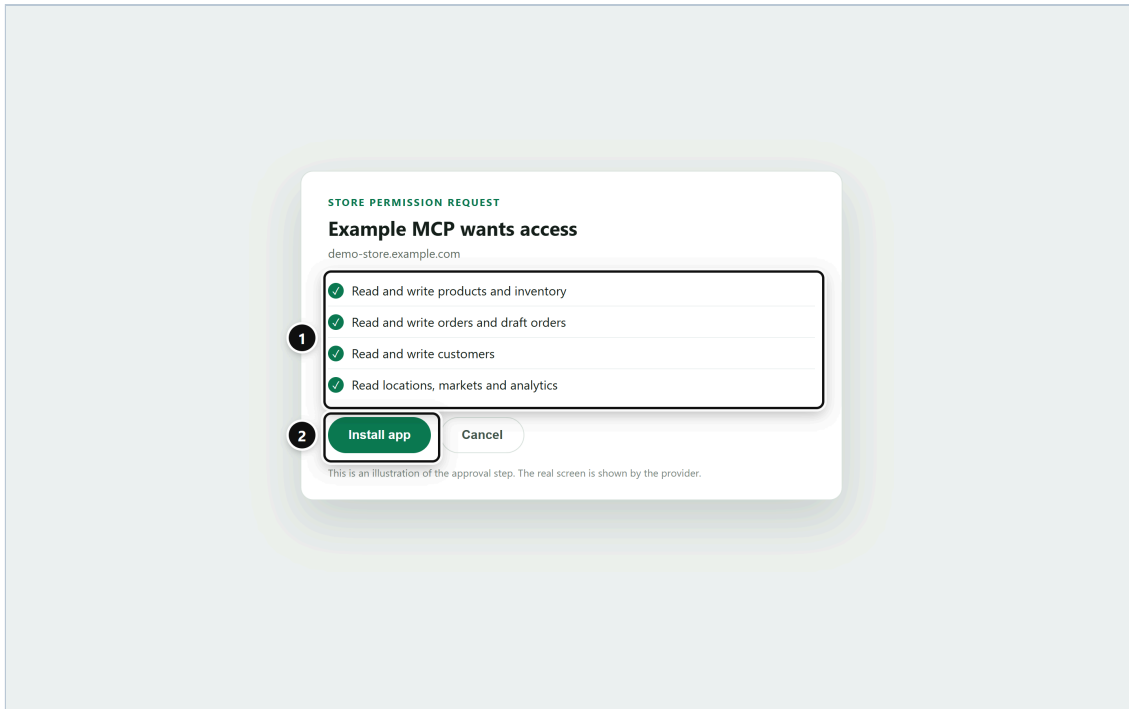

The screens below are the skill's own neutral illustration pages. They are captured the same way a real app would be, with numbered rings drawn around the parts the text refers to.

Format at a glance

Item	What the skill does
Page	A4, margins 30 mm top, 22 mm bottom, 18 mm left and right
Header	Blue SATVA SOLUTIONS banner image on every page
Footer	Contact bar image, project and subtitle, and "Page N of M"
Font	Mulish (regular, bold, italic embedded); code in Roboto Mono
Screenshots	1440 × 900 viewport at 2× scale, so 2880 × 1800 pixels
Callouts	3 px black ring with a white halo and a numbered black badge
Image frame	1 px light grey-blue border around each screenshot in the PDF

1. Approve the permissions

The first screenshot shows a permission screen. Ring **1** marks the list of access being requested and ring **2** marks the button that grants it.

Ring 1 — the permissions list. Ring 2 — **Install app**. This is an illustration of the approval step; a real guide never films a vendor's own screen.

Never put a real token, key or customer record in a screenshot. Capture against a seeded demo account with fake values only.

2. Paste the configuration

The second screenshot shows a config file. Ring 1 marks the block to paste and ring 2 marks the save reminder.

Ring 1 — the configuration block. Ring 2 — the status line that confirms the save.

Code and commands use the code style:

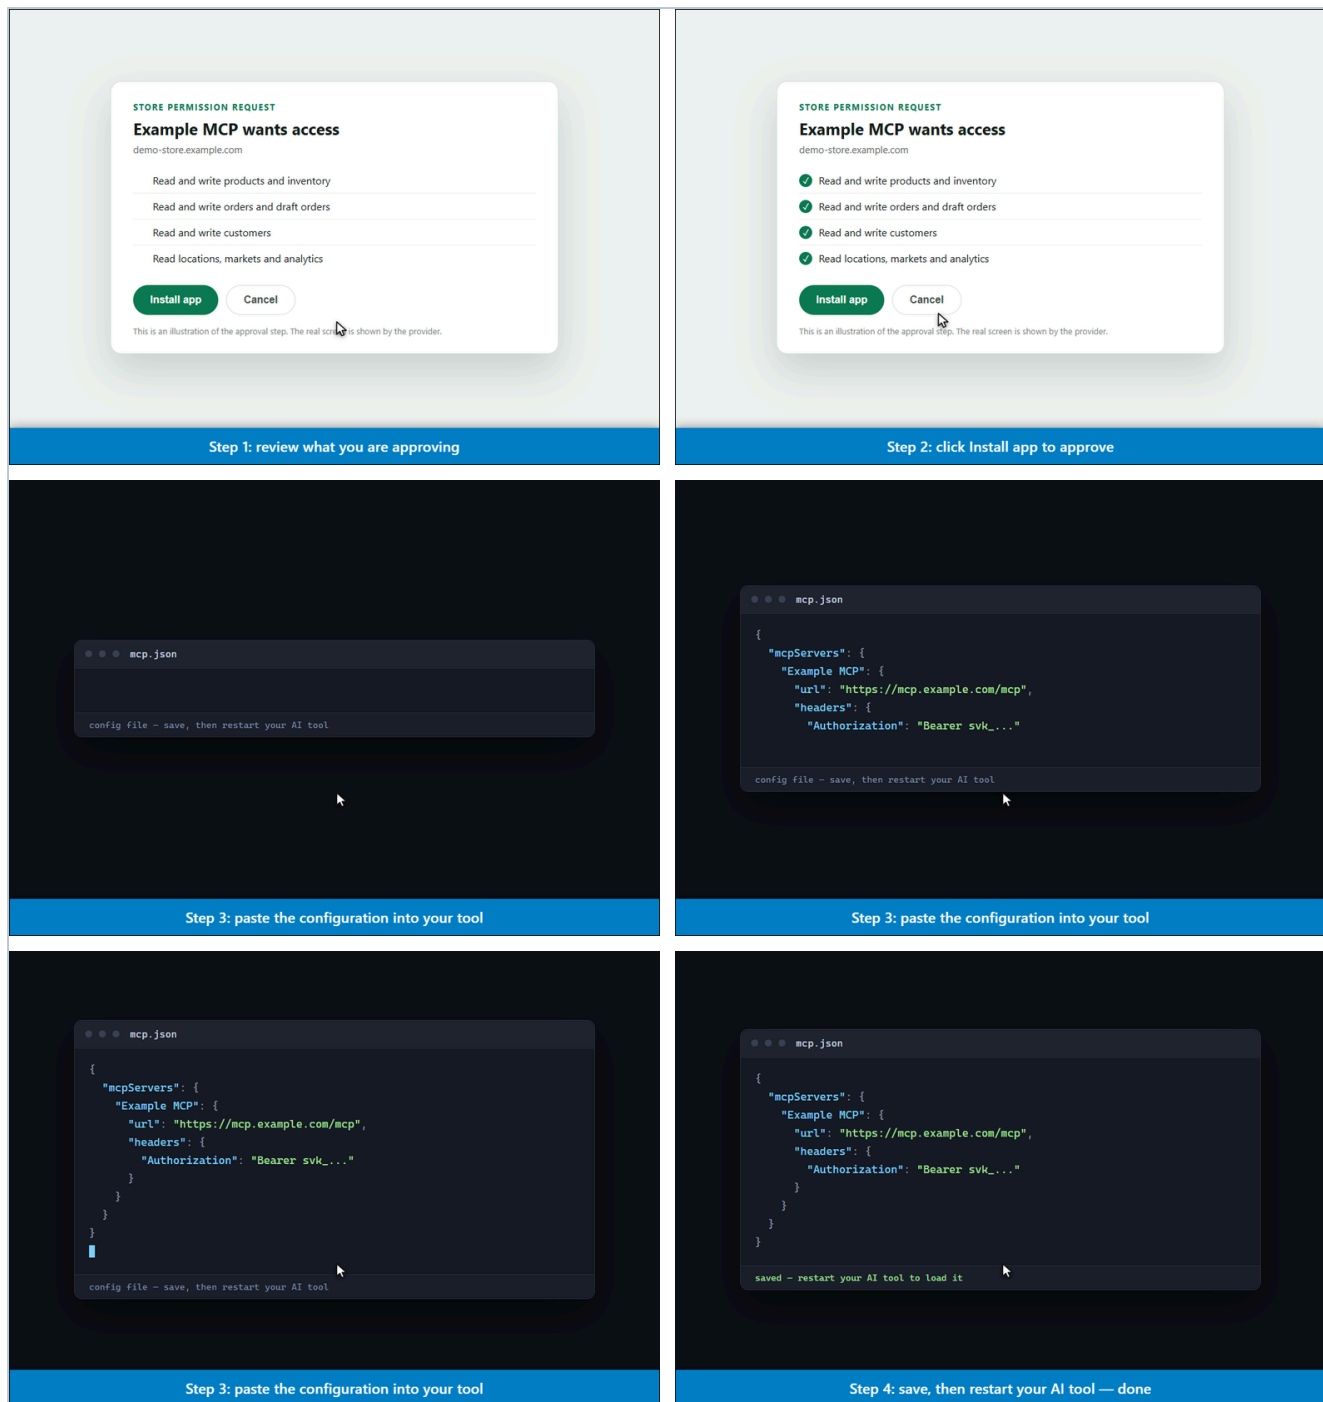

```
{
  "mcpServers": {
    "Example": { "url": "https://example.invalid/mcp" }
  }
}
```

If something goes wrong

What you see	Why it happens	What to do
Example error text	Sample row. In a real guide, error strings are copied from the source code, never paraphrased.	Follow the fix given for that exact message.

Watch the setup

The narrated GIF ships next to this PDF as `Satva-Guide-Sample-Demo.gif`. Here is its storyboard.

Six stills from the narrated walkthrough: review, approve, paste, save.

Quick reference

- Write body-only HTML: start at `<h2>`, no `<html>`, `<head>`, `<style>` or `<h1>`. The cover supplies the title.
- Classes available: `.tip`, `.warn`, `.break`, `.keep`, `figure.wide`, `figure.strip`.
- Ship the PDF and the GIF together, for example under `docs/guides/<Name>/`.
